The graph displays the cumulative distribution of DNS Name Query RTT (dhcp) results. The x-axis represents time in milliseconds (0ms to 150ms), and the y-axis represents the percentage of queries completed (0% to 100%). A line graph shows the cumulative distribution, starting at 0% at 0ms and reaching 100% at approximately 180ms. Individual query results are shown as vertical bars: green bars indicate successful queries, and red bars indicate failed queries. Most queries are successful, with a few failures occurring at higher RTT values (around 120ms and 180ms).

The graph displays the cumulative distribution of TCP Connection Setup RTT (www.google.com:443) results. The x-axis represents time in milliseconds (0ms to 120ms), and the y-axis represents the percentage of connections completed (0% to 100%). A line graph shows the cumulative distribution, starting at 0% at 0ms and reaching 100% at approximately 136ms. Individual connection setup results are shown as vertical bars: green bars indicate successful connections, and red bars indicate failed connections. Most connections are successful, with a few failures occurring at higher RTT values (around 100ms and 120ms).
