The graph displays the cumulative distribution of DNS Name Query RTT (dhcp) measurements. The x-axis represents time in milliseconds (0ms to 150ms), and the y-axis represents the percentage of successful queries (0% to 100%). A line graph shows the cumulative distribution, starting at approximately 10% at 18ms and reaching 100% at 162ms. A bar chart below the line graph shows individual measurements, with most values clustered between 18ms and 40ms, and one outlier at 162ms.

The graph displays the cumulative distribution of TCP Connection Setup RTT (www.google.com:443) measurements. The x-axis represents time in milliseconds (0ms to 70ms), and the y-axis represents the percentage of successful connections (0% to 100%). A line graph shows the cumulative distribution, starting at approximately 10% at 27ms and reaching 100% at 70ms. A bar chart below the line graph shows individual measurements, with most values clustered between 27ms and 53ms, and one outlier at 70ms.
